### Conclusion

While putting together the information in these pages, I have come to think of my job as similar to that of an armorer. The armorer produces weapons (in this case information, facts, and data) and is often agnostic as to who buys their weapons or how they are used. One important difference is that I hope the information in this work is not taken out of context or used to mislead.

Regardless how readers think about or use the information in these pages, there are a few percentages that I believe deserve special thought. Each covers a lot of ground and will be seen and interpreted differently. On the positive side, studying, analyzing, and even arguing about the meaning of information in these pages could bring new and interesting thoughts, theories, and conclusions.

- **53.39% - The ACLU's batting average was on the winning side:** In the 1,193 ACLU / Supreme Court cases, the ACLU was on the winning side 53.39% of the time over the 94 years of the Union's first 100 years. What does that number say about the ACLU, if anything? Before you read or skimmed this project, did you think about what the Union's batting average over so many years might be? Does the 53.39% seem high, low or about what you thought? Do you think, perhaps, that the number might be high because the Union only got involved in easy cases (assuming there is such a thing), or is that number low because
